

Driving Shoes Care Instructions

Use a clean wet cloth to gently clean the leather (do not rub) and after the shoe is dried, brush it with a soft brush.

Apply neutral leather conditioner to the leather in case of scratches or more severe damage. Luster after dried.

We recommend wooden (not plastic) shoe tree to keep the shape of the shoe intact.

Water damage treatment - After shoes are dried, clean the marks gently, using a clean soft cloth. Then, proceed applying a neutral leather conditioner as suggested above.
